- Clean water
- Climate change
- Environmental enforcement
- Environmental justice
- Fisheries & wildlife protection
- Green jobs
- Land conservation
- Renewable energy
- Stormwater runoff
- Sustainable agriculture
- Toxics & pesticides

# Environment

Our environment team is inspired by our clients' efforts to fight climate change, restore waterways, limit toxic chemicals, conserve wildlife, and advance clean energy. Our work to promote environmental programs, projects, and policies ensures everyone has access to safe water to drink, clean air to breathe, and open spaces to enjoy, now and for future generations.

## RECENT SUCCESS STORIES

Developed targeted messaging and communications tools to increase awareness of and participation in a new project to restore pelagic fish in the Gulf of Mexico, as part of the long-term restoration plan following the BP oil spill.

Used earned and digital media, policymaker outreach, and grassroots advocacy to pass state legislation to restrict consumer use of neonic pesticides, known to harm pollinators, and to ban chlorpyrifos, proven to cause brain damage in children.

Developed a crisis communications plan and trained staff on the plan so they are prepared to respond quickly and effectively in a crisis (and uphold the organization's stellar reputation).

Created a brand and developed a strategic communications campaign to build political support for a regional partnership targeting four states to restore the Delaware River watershed.
